

Keycloak Configurations

1. First, you need to sign up on the [Cloud IAM](#) website with your email address.

CLOUD IAM

Register

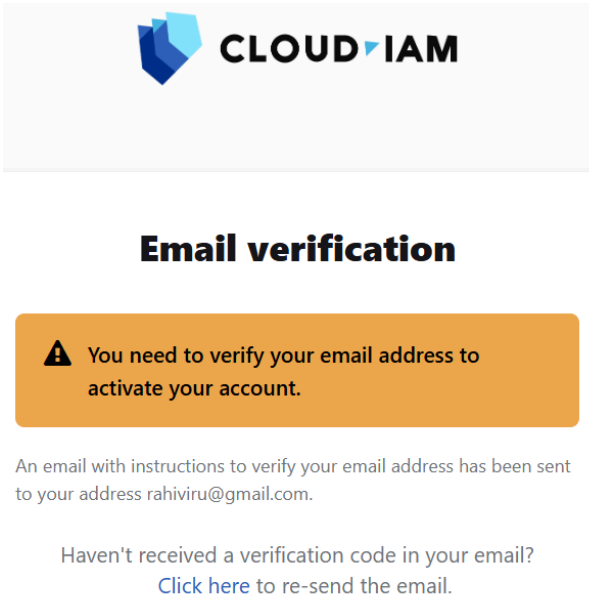

How do we use the information you provide ?
By creating a Cloud-IAM account, you agree that we may process any personal data that you entrust to us. You can manage your privacy data directly in your account. For more information, please read our [Privacy policy](#).

First name

Last name

Email

2. After completing [registration](#), you need to verify your email address to activate your Cloud IAM account.

CLOUD IAM

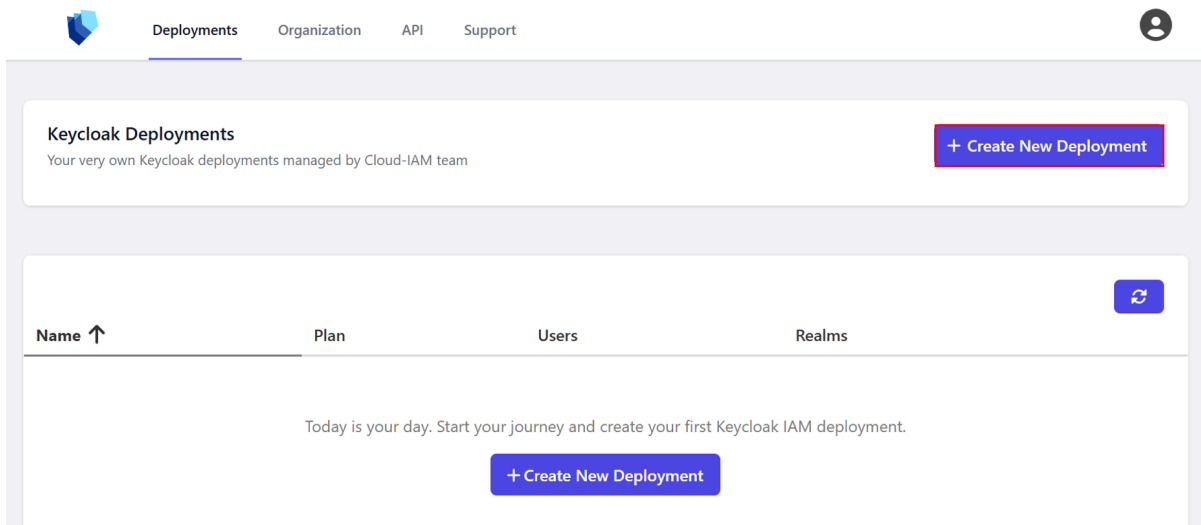

Email verification

 You need to verify your email address to activate your account.

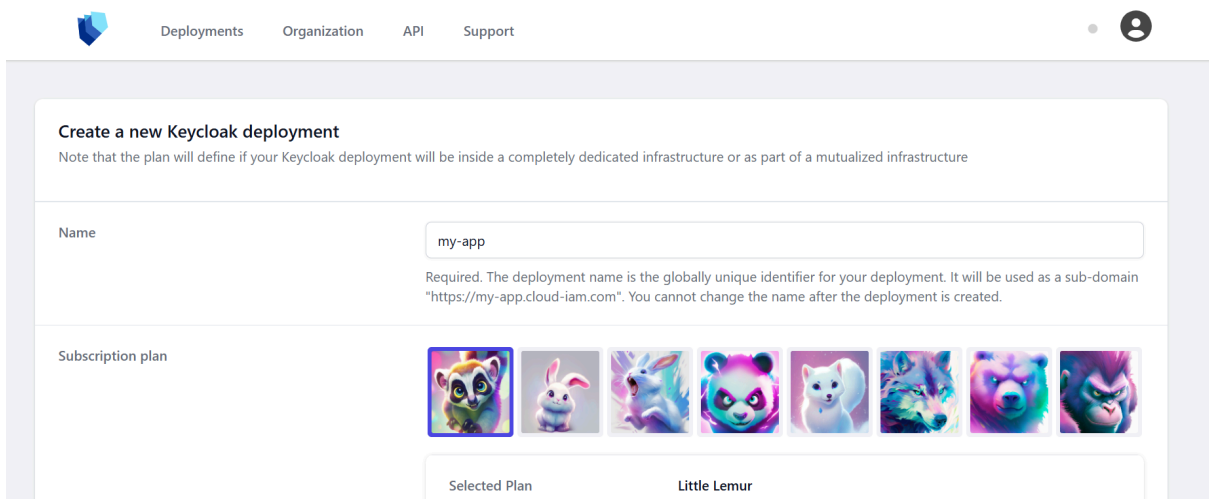

An email with instructions to verify your email address has been sent to your address rahiviru@gmail.com.

Haven't received a verification code in your email?
[Click here](#) to re-send the email.

3. After verifying your email address you need to log in with your credentials and click on the **+create new deployment** button once redirected to the below dashboard:

4. After clicking on create new deployment you will be redirected to create a new deployment page where you need to enter the name of your application, some general faq's based on you & finally submit the form by clicking create deployment button.

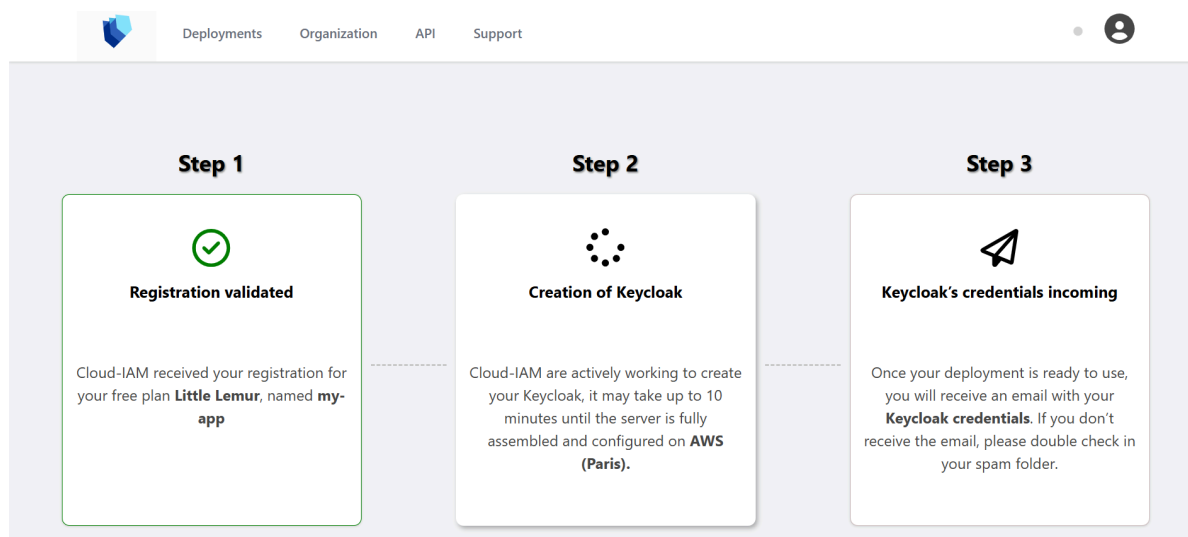

Billing	<input checked="" type="button" value="Free"/> Yearly (10 % discount) Monthly
Total cost	0,00 €

What's your profile ?	Student
What's the goal of this free deployment?	Educational purpose, as part of a class lecture
What's your knowledge level on Keycloak?	Beginner

Create deployment

- After creating deployment you will be redirected to the progress page where you need to wait for some time (up to 10 min) and the keycloak credentials will be shared to your registered email ID with the console link and login credentials.

- Now login with credentials and the keycloak console URL that you have received on your registered mail ID.

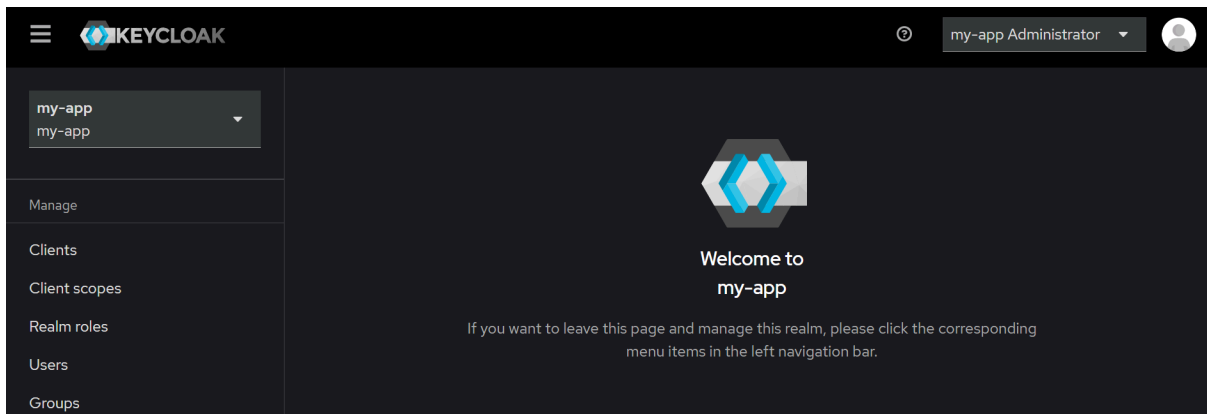

my-app

Sign in to your account

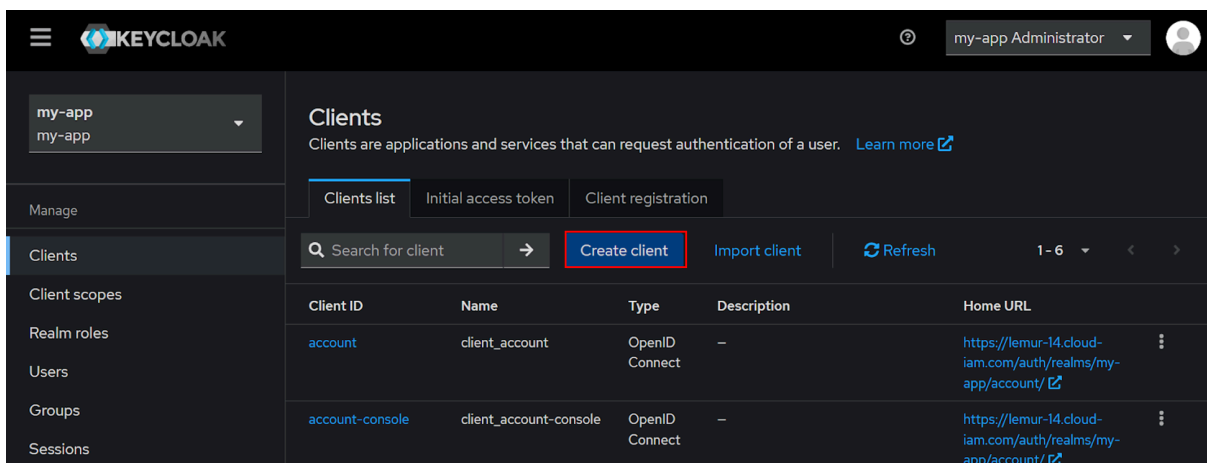

Username or email	admin
Password	

Sign In

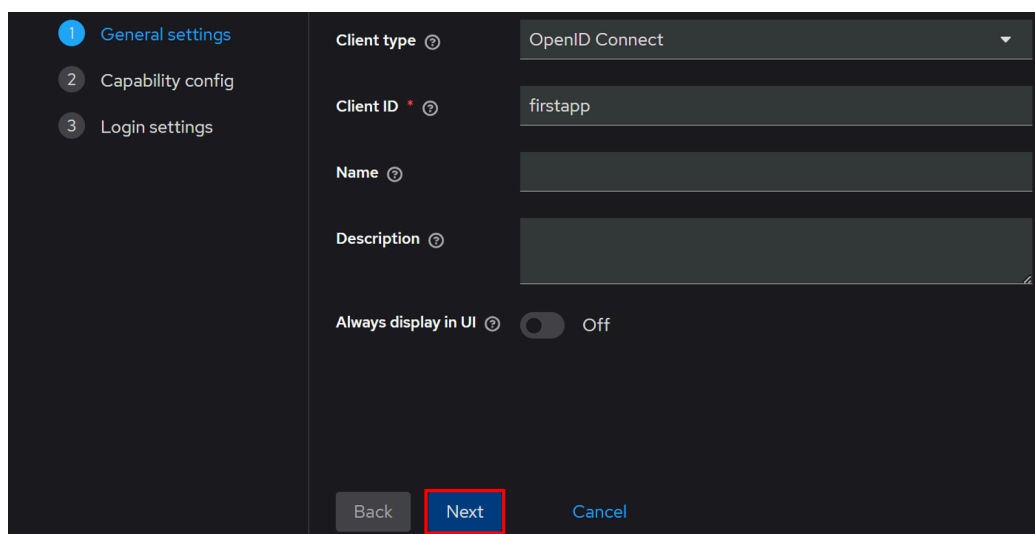

- You will be redirected to the key cloak dashboard once log in successfully:

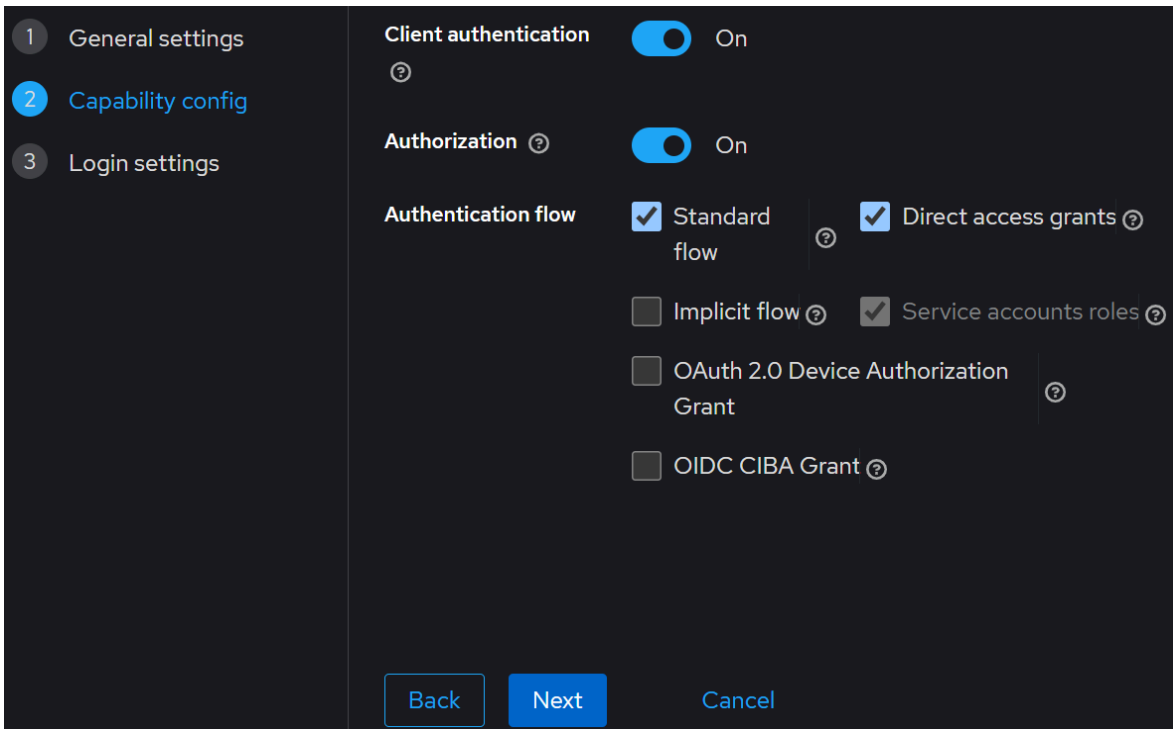

- Now you need to create your application in the client section by clicking on create client button:

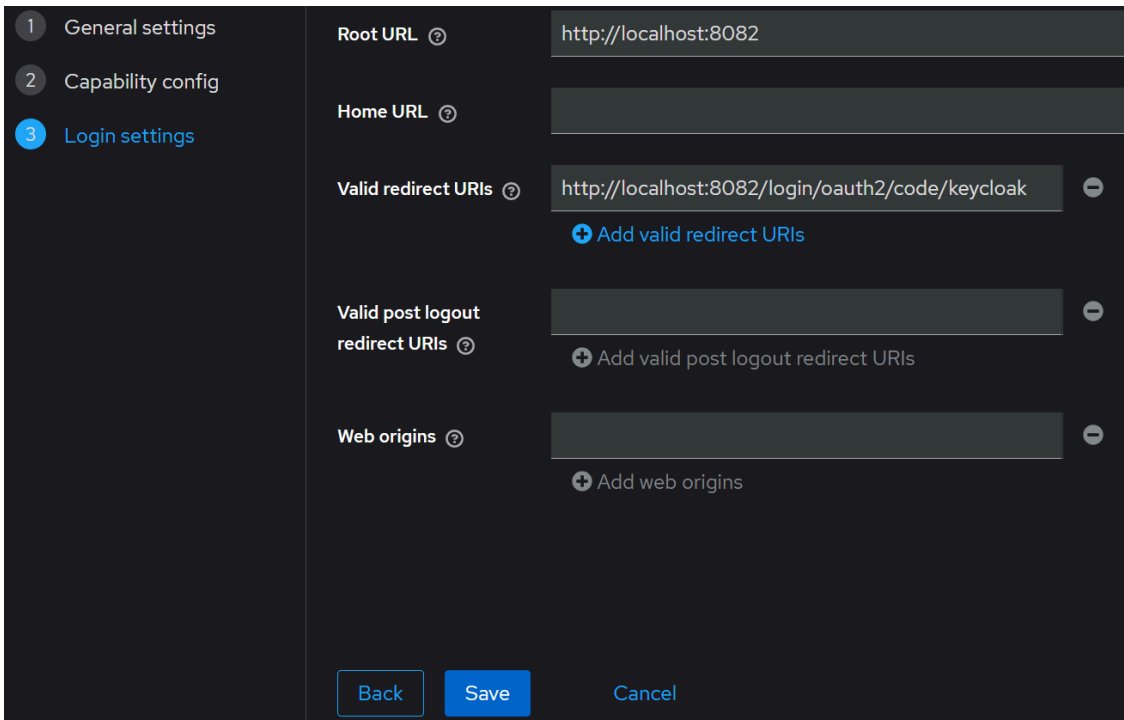

- After clicking on Create Client, you need to add the client ID based on your preference and click on the next button.

10. Now in the Capability config, you need to enable the client authentication and authorization settings and press next.

11. In login settings, add the root URL & valid redirect URIs and press the next button. Both URL contains port number based on your spring boot server. In our case, it's 8082.

12. Finally, our key cloak application/client is ready.
